NovoColor II®

The Next Generation of "No" VOC Colorants

NovoColor II colorants are the next generation of environmentally friendly and safe point-of-sale colorants manufactured by Color Corporation of America. NovoColor II has been developed with the newest and most innovative technologies. These colorants have low odor, are APE and Formaldehyde free, and are No VOC per US EPA Method 24. These colorants have been designed to offer broad compatibility in both latex and solvent systems and offer minimal settling, which eliminates the need for mechanical shaking before use. In addition, they retain our world-class quality and color reproducibility standards while simultaneously having minimal impact on critical paint properties. These colorants are controlled to the most stringent standards in the coatings industry and provide the user batch tinting uniformity that is unequaled by competitive products

Key Features:

- No VOC per US EPA Method 24
- APE and Formaldehyde free
- Easy pour over technology to our 1900 series colorants
- Superior rheology to standard universal colorants as well as competitive colorant lines
- Outstanding stability with minimal settling. Requires only hand shaking prior to use. No machine shake requirements
- Broad compatibility with both latex and solvent products
- Minimal impact on critical paint properties
- Matched to conventional colorant standards
- Exacting colorant tolerances assure reproducibility of formulas

Specifications:

- Controlled to + or - 1% Tinting Strength by Volume
- Less than 1 Delta E FMC II Color Tolerance for Most Colorants
