NovoColor® II

NovoColor® II colorants are the next generation of No VOC universal pigment dispersions manufactured by Color Corporation of America. NovoColor® II universal colorants are specifically engineered for use in decorative waterborne and solventborne coating systems that will help customers meet stringent VOC restrictions in place today and the pending regulations we face in the future.

Key Features:

- No VOC per US EPA Method 24
- APE and Formaldehyde free
- Non – Resinous and Glycol free
- Easy pour over technology to standard universal colorants
- Superior rheology to standard universal colorants as well as competitive colorant lines
- Outstanding stability with minimal settling. Requires only hand shaking prior to use. No machine shake requirements
- Broad compatibility with both latex and alkyd products
- Minimal impact on critical paint properties
- Matched to conventional colorant standards

Additional Uses/Markets:

- Caulks & Sealants
- Grout
- Cementitious Coatings
- Adhesives
- Inks
- Spandrel Glass Coatings

Specifications:

- Controlled to + or – 1% Tinting Strength by Volume
- Less than 1 Delta E FMC II Color Tolerance for Most Colorants
