OptiColor® XP

High Performance Industrial Colorant

OptiColor XP is the next generation of high performance industrial colorants. The product line consists of lightfast pigments dispersed in a unique aldehyde resin system and a blend of urethane grade ester solvents. The resin contains no free formaldehyde and has a secondary hydroxyl number of forty, which allows it to react with crosslinking systems and not act as a diluent in those systems.

Key Features are:

- Extremely Broad Based Compatibility Including Difficult Nitrocellulose Lacquers
- Volumetrically Controlled for Tinting Machines
- Minor If Any Impact on Coatings Performance
- Gloss
- Chemical Resistance Performance
- Physical Characteristics such as Hardness
- Exacting Colorant Tolerances Assure Reproducibility of Formulas
- + or – 1% by Volume
- Hegman Grind of Minimum 6 ³/₄
